

SEVSAT - BROADBAND AT SEA

SEVSAT means BROADBAND at sea

broad- band

SEVSAT - high speed communications sea - land

From your office, you may connect with your vessels onboard systems to:

- Update and improve maps, security procedures, training manuals, IT systems and much more.
- Monitor your vessels performance, log operational data, perform diagnosis, and fix problems before they occur.
- Save sending expensive experts to the ship by performing diagnosis and testing on components from land.
- Transmit pictures of error situations to assist faultfinding and shorten repair times.
- The vessel becomes an extension of your telephone system so your quick dial and telephony features become available when talking to the vessel.

SEVSAT improves safety

Safety first becomes realistically easy, and you can:

- Perform medical diagnosis and first aid with real time advice from shore based doctors.
- Access interactive medical assistance which could save lives.
- Update medical journals and have an accurate inventory of medical supplies on the vessel.

Improve crew loyalty with SEVSAT

Provide the crew with access to low cost telephone, e-mail and internet:

- The crew can stay in touch with family and friends easily, without impacting on the job at hand.
- Use internet to read local and international media, newspapers and magazines at no extra cost.
- Encourage crew loyalty with improved crew contact to friends and family, without impacting on vessel costs.
- Access land based know-how to solve problems at sea, avoid trips ashore and costly disruption of operation.
- Log on to internet resources and download updates and fixes.

**Let the ship
become
an integral
part of your
business.**

SEVSAT means ADSL

**improve
efficiency**

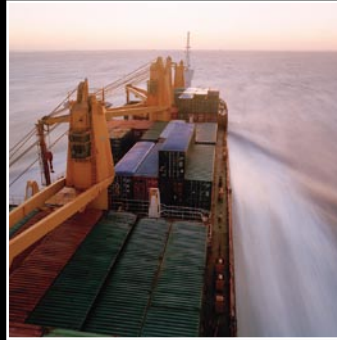

**Increase revenue with
SEVSAT broadband.**

**Always connected at a
fixed rate - means you can
run the ship efficiently.**

Requirements to have the ship connected with land based services and operated as a business unit are steadily increasing. This is becoming the way a fleet is managed, and is a result of available technology at a sensible price, in addition to requirements from both clients and crew.

**When the
crew can stay
in touch with
family and
friends, they
stay with you.**

Stopping one of our vessels for one day, is more or less the same cost as the SEVSAT system is for a year.

Roger Karlsson, Technical Director Marininvest
